😊 Vessel ideal for the purpose 😞 Vessel suitable for the purpose 😞 Vessel not recommended for the purpose

The administrations in charge of maritime or fishing affairs and/or local and regional representatives of fishermen associations, keep up-to-date inventories of vessels declared for professional use, listing the precise characteristics of each one and in particular their class. Such list proves to be useful when trying to identify means to respond to a pollution event.

MAIN RESPONSE TOOLS

Many varied tools used by fishermen can prove to be very efficient in response actions, whether they are manual or mechanical, specific to the daily activities of professionals or adapted to spill response operations.
