

# POSOW

Preparedness for Oil-polluted

Shoreline cleanup and

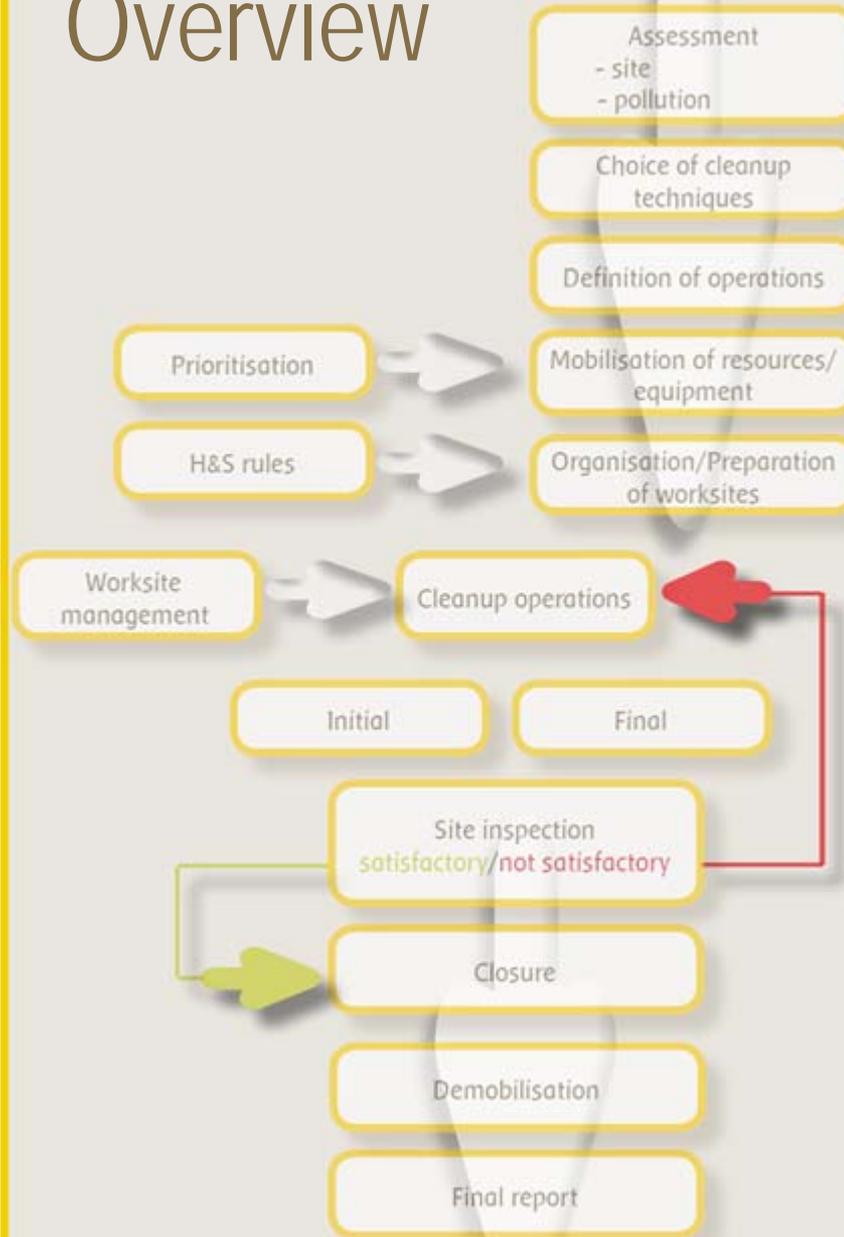

Oiled Wildlife interventions

## General principles of cleanup

POSOW is a project co-financed by EU under the Civil Protection Financial Instrument developed in cooperation with ISPRA, Cedre, Sea Alarm and CPMR and coordinated By REMPEC a regional Centre of the Barcelona Convention

# Overview

# Assessment of site and pollution

- Define high priority sites
- Distribute and proportion the response effort
- Organise future worksites rationally
- Use suitable response techniques and means

Refer to the manual

# As an example...

-  Heavy oiling
-  Medium oiling

# Choice of cleanup techniques

- Characteristics of the pollution
  - Nature of the oil
  - Quantity of oil / Type of deposits
  - Extent of the pollution
- Characteristics of the sites
  - Accessibility
  - Exposure
  - Nature of the substrates
  - Presence of debris
- Uses and sensitivities of the sites

Photo A

Photo B

# Definition of operations

- Who will carry out the cleanup?
- What kind of equipment will be needed?
- How the worksites will be organised?
- Which level of “cleanliness” to reach?
- How to control “cleanliness”?

Because of economic and ecological sensitivities, the season, local specificities or the quantity of stranded oil, some areas will be given priority for cleanup!

# Mobilisation of means/equipment

- Equipment (specialised or not) may come from:
  - National or local (i.e. harbours) stockpiles
  - Stockpiles belonging to industry (i.e. refinery)
  - Municipalities
  - Army
  - Private companies
  - Manufacturers and providers

Photo C

Photo D

# Mobilisation of means/equipment

- Personnel involved may come from:
  - Administrations
  - Fire brigades
  - Municipalities
  - Army
  - NGOs
  - Private contractors (i.e. specialised cleanup companies)
  - Volunteers

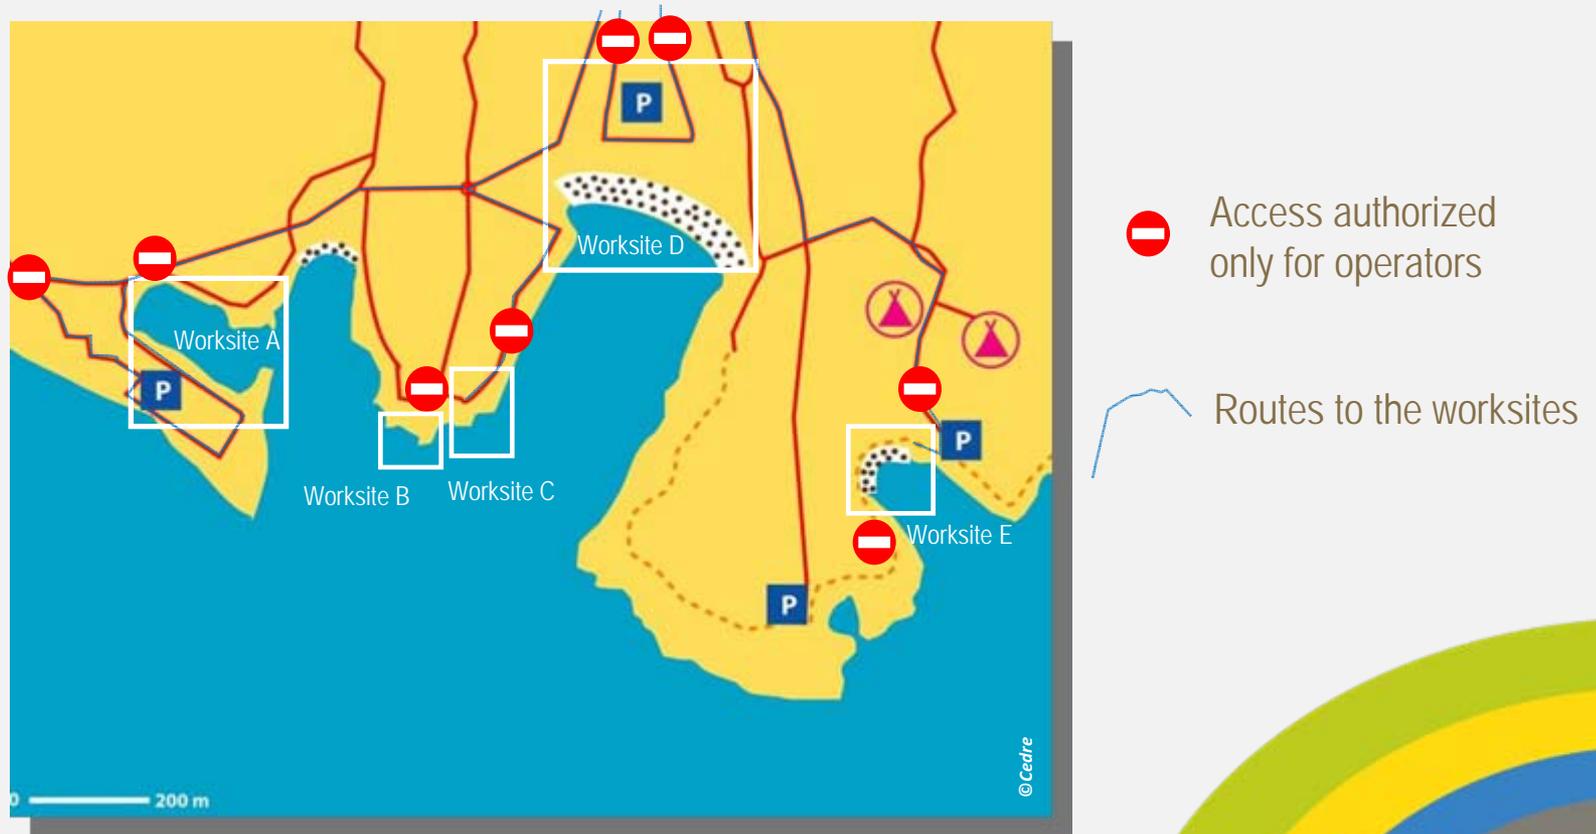

Some techniques must be implemented  
by specialised cleanup companies!

Photo E

# Organisation and preparation of the worksites

- Delineate routes and access to the worksites
- Restrict access for public

# Organisation and preparation of the worksites

- Prepare and signpost the different areas
  - the polluted area
  - the waste storage area
  - the decontamination area
  - the rest area
  - the storage area for tools and equipment
- Protect the ground where necessary

# Cleanup operations

- Two phases:
  - Initial cleanup
    - To prioritise the removal of accumulations of oil and various heavily polluted materials
  - Final cleanup
    - To return sites to their previous uses
    - To allow the affected environment to resume normal ecological functioning

Photo F

Photo G

Human safety must be the priority!

# Example of cleanup techniques decision matrix for initial cleanup

- 😊 to be given priority consideration
- 😊 may be useful
- 😞 to be considered under certain conditions
- ⊗ inappropriate
- 🟡 fluid to slightly viscous oil
- 🟠 viscous to highly viscous oil

# Site inspection

- To declare the end of operations, it is necessary to check that:
  - the level of cleanliness required is achieved
  - the site is safe from a sanitary point of view
  - environmental recommendations were complied with.

Photo H

Photo I

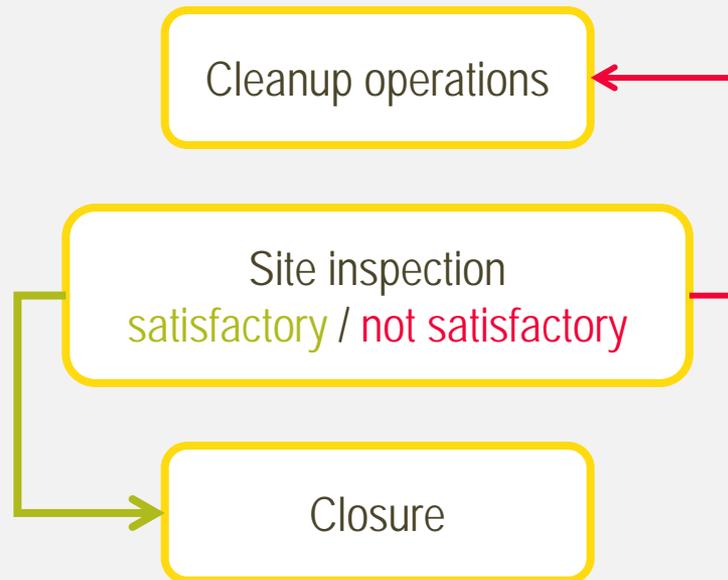

Photo J

# Closure

- Once the site inspection is satisfied:
  - equipment and tools must be demobilised
  - all the waste must be removed from the primary storage
  - the site must be summarily restored if necessary
  - the site must be secured whenever operations contributed to making it hazardous

Organise regular surveys if there is still oil at sea or on nearby sites.

Photo K

# Demobilisation

- Equipment should be:
  - cleaned
  - repaired
  - repackedto be shipped back to its original stockpile.

Photo L

Once demobilised,  
volunteers should be  
provided with a  
certificate.

# Final report

- The final report must be drafted by the beachmaster
- This report must include:
  - whole daily worksite forms
  - the list and origin of personnel involved
  - incident reports if any
  - the site inspection report.
- This report will be used:
  - to prepare documents needed to claim compensation
  - to make feedback
  - in case of legal proceedings.
